DETAILED ACTION

1. Claims 1 to 30 are presented for examination. Acknowledgement is made of the preliminary amendment filed 8-25-2004.

Information Disclosure Statement

2. The references listed in the information disclosure statement submitted on 9-3-2004 and 7-2-2005 have been considered by the examiner (see attached PTO-1449).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 8 to 15 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The components that perform the decoding function critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The disclosure describes low density parity check decoding process with respect to figures (19 to 22) wherein the decoder includes edge messages, a bit node calculator, and a check node calculator for performing decoding of a low density parity check (LDPC) code.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the edge messages, the bit node calculator and the check node calculator necessary for the decoder to perform its decoding function as defined in the specification. Claims 9 to 15 are also rejected due to their dependency on a rejected base claim.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

8. Claim 8 is rejected under 35 U.S.C. 102(e) as being anticipated by Coker et al. (USPAP 2003/0074626 A1).

Claim 8:

Coker teaches the claimed invention of a method for decoding low density parity check (LDPC) codes using a multi-level decoder (140) that receives multi-level symbols (see par. 0028).

Allowable Subject Matter

9. Claims 8 to 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The following is a statement of reasons for the indication of allowable subject matter: the prior art made of record taken alone or in combination does not suggest nor disclose each and every claimed features of a decoder or a decoding method, which includes the limitations of ...updating a plurality of edge messages that corresponds to a plurality of edges that communicatively couple a plurality of symbol nodes... and during the last iterative decoding makes the best estimate for each symbol of the plurality of symbols...
